TurfSteel NON-PNEUMATIC

Benefits of Non-pneumatic Technology:

- No downtime due to flats
 - More uptime equals higher profits for the end-user
- Longer tread wear
 - The flatter tread pattern means tread is not wearing out the center of the tire first
 - More even tread wear equals longer tire life
- Better traction
 - The bar-shaped footprint of the flatter tread pattern allows for better traction and less turf tearing during zero-degree turns than the oval-shaped footprint of the pneumatic (pictured right)
- Field tested and proven both for durability and performance
 - Designed for military applications... the NPT is literally bullet-proof
- Custom rim designs, as well as custom offsets and bolt patterns, all available at low cost

Footprint study of Kenda 24" NPT vs benchmark K505 and competitors

Performance Characteristics Compared to Pneumatic:

- Better dry traction
- Better wet traction
- Reduced turf tear
- Improved ride quality
- Improved side-hill stability
- Up to 3x tread life
- Priced to be worth the value that it provides
- Easily cost-justified to the end-user
- No flats, reduced down-time
